DETAILED ACTION

This action is in response to the papers filed 9/21/2007.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-13 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The “computer readable medium,” may be an “communication media” according to the specification. This subject matter is not limited to a process, machine, manufacture, or a composition of matter. Instead, it includes a form of energy. Energy does not fall within a statutory category since it is clearly not a series of steps or acts to constitute a process, not a mechanical device or combination of mechanical devices to constitute a machine, not a tangible physical article or object which is some form of matter to be a product and constitute a manufacture, and not a composition of two or more substances to constitute a composition of matter. Note amending claims 1-13 to recite a “computer storage medium” instead of a “computer readable medium” which would overcome this rejection.

Claims 27-33 and 35-37 are rejected under 35 U.S.C. 101 because the claim invention is directed to non-statutory subject matter. With the respect to claim 27-33 and 35-37, what is being claimed appears to read on software per se as the central watermark detector may be implemented via software alone according to page 6 lines 1-3 of the specification. Software by itself is not statutory. A claim to a data structure,

Art Unit: 2132

per se, or other functional descriptive material, including computer programs, per se, is not patent eligible subject matter. This is exemplified in *In re Warmerdam* 31 USPQ2d 1754 where the rejection of a claim to a disembodied data structure was affirmed.

Functional descriptive material claimed in combination with an appropriate computer readable medium to enable the functionality to be realized is patent eligible subject matter if it is capable of producing a useful, concrete and tangible result when used in the computer system. Compare *Warmerdam* to *In re Lowry* 32 USPQ2d 1031 where a memory with a data structure that increased computing efficiency was patentable.

Allowable Subject Matter

Claims 14-29 are allowed.
